United Nations. (n.d.). *The climate crisis – A race we can*

win. <https://www.un.org/en/un75/climate-crisis-race-we-can-win>

The article delves into climate change, a leading global threat. Climate change has caused devastating consequences worldwide. Natural disasters, conflict, extreme weather, food insecurity, economic disruption, and environmental degradation have been on the rise due to rising temperatures. The main ideas, themes, and arguments of the article relate to global warming, food and water insecurity, weather extremes, disasters, and conflict. The article targets the global community, which is directly impacted by this climate crisis.

The author believes that human activity contributes significantly to global warming, food insecurity, natural disasters, weather extremes, and several other negative consequences of climate change.

The article is relevant to my study about how climate change affects agricultural production in developing countries. This is because it discusses how climate change affects water quality and availability. Although the article extensively discusses the climate crisis, it overlooks potential benefits like decreased winter deaths. Climate crisis is a race that the global community can win. Nature-based solutions will help reduce the global carbon footprint and create a more resilient world.
